Press and hold the button for three seconds in order to switch the device's status.

Input Voltage : DC 5V~12V

Temperature : 0~99° C(32~210.2° F)

operate current : <20ma

Installation 1 🔍

Follow the right sequence to install.

★ Use an appropriate amount of thermal paste.

Installation 2

Follow the right sequence to install.

The thumb screw cannot be locked too tightly, the spring is slightly pressed and the gap is kept as shown below. The thumb screw cannot be rotated to the end. When the spring screws too tight, the SCM3H6 screw will be driven and will be taken away from the motherboard, which will cause the water block and CPU not to be closed well.

Notice

- Before filling in the water, please make sure all the components are installed correctly. To prevent any leakage which may damage the PC components, please perform a 24-hour leaking test with only the pump connected to the power supply.
- Bitspower reserves the right to change the product design and interpretations. These are subject to change without notice. Product colors and accessories are based on the actual product.
- When using leak tester on water cooling loop, in order to avoid product damage due to excessive pressure, the input pressure should not exceed 0.5kg/cm^2 (Bar). If the product is damaged due to excessive pressure, it will be borne by the customer. Forbidden to use the leak tester when there is water in the loop or the pump is running.
- Bitspower requires to use of distilled or pure water or Bitspower Pellucid Coolant as the water-cooling liquid. Also, the consumer can add Bitspower Dye to Pellucid Coolant for the color requirement. But please do not add any biocide by yourself. If the consumer chooses different water-cooling liquids, the resulting impurities may cause peeling off the coating on some of the hardware, water channels blockage by built-up residue, improper operation of the water pump, water tank tube breakage, and O-rings deformation or loss sealing leading to leakage. Any issues related to the use of inappropriate water-cooling liquid will be the responsibility of the consumer.

注意

- 跑水前，請先確認所有零件已安裝在正確的位置上，在不開主機，單開水泵的情況下，進行 24 小時的跑水測試，確保無漏水情況後再開主機，避免發生漏水而導致電腦零件的損壞。
- 本公司保留對產品的設計更改以及解釋的權力，如有更動恕不另行通知，產品顏色與配件以實物為準。
- 當使用測氣產品測試水路時，為避免由于壓力過大導致產品損壞，輸入的壓力請不要超過 0.5kg/cm^2 (Bar), 如因壓力過大造成產品損壞，將由客戶自行承擔。嚴禁客戶在水路有水及水泵開啟的情況下進行氣體飽壓測試。
- Bitpower 要求消費者使用 蒸餾水或純水或 Bitpower 透明冷卻液作為水冷液使用。此外，也可以添加 Bitpower 染料到透明冷卻液中以滿足顏色要求。如果消費者選擇不同的水冷液，可能會引起水路配件中的塗層剝落、積垢堵塞水道、水泵磨損、水箱管破裂、O 型圈變形或失去密封性導致漏水等。任何因使用不當水冷液導致相關的問題將由消費者自行負責。
